

Rye Park Wind Farm Construction Update

Week Commencing 29 November 2021

Construction Updates are released fortnightly and include a summary of construction works undertaken and a look-ahead of upcoming works.

The Tilt Renewables team is preparing to commence construction of the Rye Park Wind Farm, located approximately 11km north-east of Yass in the Southern Tablelands of New South Wales.

Project infrastructure includes the upgrade/maintenance of ~50 km of public roads, access track and hardstand network, 66 wind turbines and electrical substations.

Tilt Renewables construction contractor Zenviron continues to mobilise staff and equipment resources to the region in anticipation of the commencement of construction, including public road upgrades.

This last week, the team continued pre-construction minor works including the commencement of access to the onsite temporary compound facilities.

While the region has been inundated with heavy rainfall, rendering parts of the site inaccessible, the team will carry on with pre-construction minor works, including establishment of environmental and heritage no-go zones, minor clearing, construction of the main access track to the temporary site facilities and establishment of the temporary site facilities.

It is anticipated that road upgrade works will commence this week along Rye Park Dalton Road - southern end, and with intersection upgrade works at the 3 site entries. With this in mind, we would like to highlight the possibility of minor delays expected along these routes.
